

Student Tools

Effective January 2008

Student tools are a requirement of this program and should be purchased upon entering the program. Students may provide their own tools if they wish, but may not enroll in any Airframe or Powerplant courses until their tools are presented to the Hangar Tool Room Technician for inventory. Students must provide a tool set consisting of the tools listed below. A student tool kit is available for purchase though the Kent Campus bookstore. Students may supply their own tools, but must provide everything listed on the list below. Students who choose to provide their own tools should note the restriction on tool box size. Students should procure quality US-made tools. Cheap import tools will only damage expensive parts and will not be allowed. Acceptable brands include Snap-On, Proto, MAC, MATCO, Armstrong, Wright, and Craftsman. Contact the Program Manager if you have any questions concerning the student tool requirements.

AVIATION MAINTENANCE TECHNICIAN TOOL LIST
(Required by Student)
